

Science in 5/6HB

Science

In 5/6 HB we have been learning about “Matter”. During this time we have been investigating how different states of matter can change and conducting experiments to learn how evaporation, melting, freezing and condensation occurs.

“I learnt how evaporation works”. – Aneeka

“I learnt that there are chemical and physical changes” - Charlea

“I learnt that matter is all around us” – Sarita

“I learnt when you heat water it turns into water vapour” - Noah

We have also been looking at the difference between chemical change (irreversible change) such as burning and physical change (reversible change) such as melting wax.
