

**Ryan:**

### How to make a picture with a different picture inside

1. Using the program snapseed, search pictures of an animal with a white background on Safari.
2. Select the pencil tool from the menu on the side.
3. Press double exposure and select another picture on Safari (we chose cities).
4. Locate the two pieces of paper icon with an arrow above it, and select view edits.
5. Press the double exposure layer, click the box and the pencil icon
6. Shade the animal with 100% double exposure
7. When finished click on the tick and save using the box and arrow icon.

**Seth:** My Typography art

Step one find a silhouette

Step two save it and put it on ibis Paint

Step three make the image fade

Step four make a new layer and select it

Step five write the name of the silhouette in bubble writing inside the silhouette

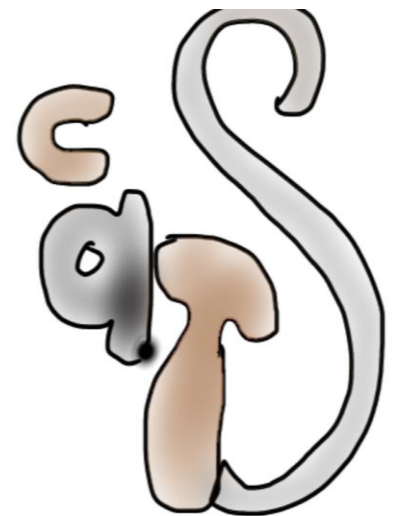

Step six make the silhouette disappear

Step seven use the magic wand and select the letters

Step eight use the airbrush to colour in the shapes

Step nine deselect the shapes with the magic wand

Hopefully your word looks like the silhouette.

**Jack:** Ok so we did this thing in IBS paint.

We made the letters and then we put cool stuff on it which was so fun and I hope you like my art work

**Aisha:** I made my Paris Kitten on snap seed which is a new app to us.

I had my original kitten picture I made black and white (for maximum effect) and overlapped the Paris picture and erased the excess picture. Hope you like my kitten!
